ACTIVATIONS · NEWCO

The gold layer gets acted on, not just queried

Activations is the fourth native NewCo stage, right after Transformations. The instant gold.fct_tenant_credit_risk flags a tenant with an S&P downgrade or watchlist placement, a lease expiring inside 180 days, and 3%+ of a building's NOI, Activations pushes the renewal-risk segment straight into VTS — no reverse-ETL vendor, no second copy of the data, no analyst in the loop.

TRIGGER	DESTINATION	TIME TO OUTREACH
164 days downgrade + expiry <180d + 3%+ NOI	**VTS** Tenant, Lease, Deal, Task fields	**45–60d → same-day** manual report cycle, replaced

WHAT YOU SAY	WHAT YOU SHOW
"Here's the part most SEs skip when they explain Activations. We just computed tenant credit risk in the gold layer, fct_tenant_credit_risk — an S&P downgrade, a lease expiring inside 180 days, and a tenant carrying 3% or more of that building's NOI. That's not a dashboard tile, that's a trigger."	**Architecture page → Activations panel → trigger condition on fct_tenant_credit_risk.**
"Activations reads that segment straight off the governed gold table and pushes it into VTS, the same leasing CRM your reps already live in — no CSV, no ticket to data engineering, no custom script."	**/activations-live: Segment Definition → Field Mapping → the five field mappings into VTS.**
"Watch the sync run: 342 tenants qualify this morning, and Activations just wrote 12 new high-priority renewal tasks into VTS with the risk score and NOI concentration attached as custom fields on the tenant record."	**/activations-live → Sync Preview → API Push → Destination Confirmation table, 342 synced / 12 new tasks.**
"That's a 164-day head start on the renewal conversation instead of finding out at the next quarterly portfolio review — protecting the same $14M in at-risk NOI already flagged on the Investment Committee dashboard."	**Click into a VTS task card: "Renewal outreach - high priority - $2.1M NOI concentration - 164 days to expiry."**

Baseline: leasing reps today learn a tenant is a flight risk in the next quarterly manual portfolio review, weeks or months after the S&P rating action posted. Closing that gap is modeled to protect $14M in at-risk NOI this quarter and cut time-to-outreach from a 45–60 day manual cycle to same-day. Synthetic data — not a real REIT.
